

As a licensed radio amateur who is active on the HF bands, especially in weak signal modes, I fully support the Comment submitted by The American Radio Relay League concerning Docket ET 03-104.

I live within 500 yards of a power substation and must already contend with unintentional power line interference. Allowing the power company to intentionally modulate the grid with HF frequencies will most definately rob me of any ability to operate on the HF bands.

The comments made by proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. Further research and innovations in BPL will be needed to avoid the great risk this innovative technology will not cause irreparable interference to services licensed to operate in the 2 MHz - 80 MHz frequency range. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.

I request that you deny ET 03-104. Do not start down the slippery slope that its approval would present.

Respectfully,

John Fraizer
